Throughout my professional career, I have gained professional experience and knowledge in the fields of communication, project management, information technology, law, finance, as well as children's development, education, rights, and support.

I have led and implemented numerous European Union-funded projects, primarily focusing on long-term community value creation, sustainable cultural development, and the development of new forms of collaboration.

My current professional and research activities lie at the intersection of visual culture, algorithmic image environments, and AI-native web systems.

My theoretical work is based on art historical and visual cultural foundations, with particular attention to critical and decolonial approaches, transnational artistic dialogue, as well as questions related to the perception of color and embodied experience.

My long-term research examines how algorithmically generated and digitally mediated visual environments shape children's visual perception, emotional sensitivity, and processes of meaning-making.

My work related to this research direction is documented in several publications, preprints, working papers, and books with DOI and ISBN identifiers.

These include the art historical research work "Color as a Generative Principle in the Work of Sonia Delaunay", "Children's Color Acquisition Across Cultural Environments in the Age of

Algorithms", as well as "The Role of Color in Pedagogical and Learning Environments and Children's Perception".

Social responsibility and community engagement are an important part of my work. As a volunteer, I participate in initiatives that support children, with particular attention to social inclusion and expanding opportunities for younger generations.

Working with children and supporting children's development is, for me, an interdisciplinary field that connects several areas of knowledge and requires continuous learning.

In recent years, I have deepened my knowledge of child psychology, pedagogy, education, child protection, inclusive education, and parental support through courses offered by several international universities and educational institutions.

Through the University of Geneva's "Développement psychologique de l'enfant" course, I studied the process of children's psychological development, age-related characteristics, and factors influencing development.

Related to this is Yale University's "Introduction to Psychology" course, which provided general foundations in psychology and contributed to my ability to interpret children's behavior, emotional functioning, and development within a broader psychological context.

My psychological and cognitive knowledge was further expanded through the University of Cambridge's "Introduction to Cognitive Psychology and Neuropsychology" course. During the course, I became familiar with fundamental areas of cognitive psychology and neuropsychology, including the processes of attention, memory, thinking, learning, and information processing.

This knowledge contributed to a better understanding of children's learning and developmental processes from both psychological and cognitive perspectives. The competencies associated with the course also include Psychology and Child Development, making it directly relevant to understanding children's development. In the field of child-rearing and parental support, Yale

University's "Everyday Parenting: The ABCs of Child Rearing" course provided particularly valuable professional experience.

The course provided practical methods for understanding children's behavior, applying positive reinforcement, communicating appropriately, shaping behavior, and managing challenging situations.

As a result, my competencies in communication with children, conflict management, and behavioral support were further developed.

The Commonwealth Education Trust's "Foundations of Teaching for Learning: Developing Relationships" course placed an emphasis on developing pedagogical relationships.

Through this course, I acquired competencies that help me establish trusting relationships with children, communicate empathetically, and create a supportive and safe learning environment. Recognizing children's individual needs and inclusive education are also key components of my educational background.

I also completed several courses at the University of Cape Town related to children with special needs:

- Teaching Children with Visual Impairment: Creating Empowering Classrooms
- Educating Deaf Children: Becoming an Empowered Teacher
- Severe to Profound Intellectual Disability: Circles of Care and Education
- Disability Inclusion in Education: Building Systems of Support

I acquired competencies in recognizing the needs of children with various disabilities, applying an inclusive approach, understanding individual support options, and developing an inclusive educational environment.

Through Universidad de Palermo's "Introduction to ADHD: What It Is and How It's Treated" and the University at Buffalo's "ADHD: Everyday Strategies for Elementary Students" courses, I became familiar with the fundamental characteristics of ADHD, ways of supporting children in everyday life, and practical strategies for creating a more structured and supportive environment for affected children.

One of the determining factors in children's development is the management of trauma and difficult life situations.

The University of Minnesota's "Resilience in Children Exposed to Trauma, Disaster and War: Global Perspectives" course provided particularly important knowledge in this area.

During the course, I learned how trauma, wars, disasters, and other severe life situations affect children's development, as well as which factors can support the development of resilience, that is, psychological adaptability. This course developed my competencies in recognizing circumstances that place children at risk, applying a trauma-informed approach, and creating a supportive environment.

In relation to children's learning and literacy development, the University of California, Santa Cruz's "Children Acquiring Literacy Naturally" course provided specialized knowledge.

During the course, I became familiar with the fundamental processes involved in learning to read, natural literacy development, and its social significance. The course contributed to a better understanding of children's learning processes and the development of reading skills.

In the field of children's rights, the University of Geneva's "Children's Human Rights – An Interdisciplinary Introduction" course provided a particularly important professional foundation. The course examined children's rights from legal, psychological, social, health, and cultural perspectives.

I became familiar with the fundamental international frameworks concerning children's rights, the importance of child protection, children's right to participation, as well as the complexity of violence against children and issues related to justice. This knowledge strengthened my child-centered, rights-based, and advocacy-oriented approach.

In relation to supporting children at home, The State University of New York's "Home-Based Child Care" course also provided important practical knowledge.

The course contributed to an understanding of safe, responsible, and development-supportive care for children in the home environment. It provided competencies in recognizing the principles of a child-centered care approach and the considerations involved in everyday childcare.

In the field of pedagogical and social inclusion, the University of Glasgow's "Diversity and Inclusion in Education" course further broadened my perspective.

It reinforced the professional approach that education should take into account children's different backgrounds, abilities, needs, and individual circumstances. As a result, my inclusive, diversity-respecting, and child-centered thinking was further developed.

The Indian Institute for Human Settlements' "Reimagining Education for Equity" course directed my attention to issues of educational equality and equity.

The course places equal access to educational opportunities, consideration of social differences, and support for disadvantaged children at the center.

The Museum of Modern Art's "Teaching with Art: Using Inquiry, Activities, and Themes" course presented opportunities for creative and art-based education. The course developed my creative pedagogical thinking and demonstrated how artistic content, questions, activities, and themes can be used to support the learning process.

The University of Colorado Boulder's "School Health for Children and Adolescents" specialization represented an additional area of knowledge related to health and educational environments.

In summary, the most important competencies I have acquired through my studies related to children include:

- understanding children's psychological and emotional development
- fundamental understanding of cognitive developmental and psychological processes
- child-centered communication
- empathetic and supportive relationship-building
- application of child-rearing and behavioral support methods
- positive reinforcement and behavior shaping
- fundamentals of supporting children with ADHD
- recognizing the needs of children with special educational needs
- understanding the education of children with visual and hearing impairments
- fundamentals of supporting children with intellectual disabilities
- an inclusive and welcoming educational approach
- understanding children's trauma and difficult life situations
- supporting resilience and psychological adaptability
- understanding children's learning and literacy development
- a child rights and child protection perspective
- advocacy for children's interests and rights
- diversity and educational equity
- creative and art-based pedagogical approaches
- creating a safe, supportive, and development-promoting environment.

For me, these courses do not represent independent courses unrelated to one another, but rather form part of a unified professional perspective. Their common goal is to enable me to see the child not merely as a learner or a participant in education, but as an individual person with their own needs, rights, emotions, and opportunities for development.

Based on the knowledge I have acquired, I consider empathy, patience, creating a sense of safety, respecting individual differences, appropriate communication, and finding the form of support that best promotes each child's development to be particularly important when working with children.

I have complemented my studies related to children's development, education, and support with knowledge of the modern digital world.

I consider it particularly important that professionals working with children understand not only psychological and pedagogical processes, but also the digital environment in which today's children grow up.

The artificial intelligence and machine learning knowledge I acquired through Stanford University's Machine Learning Specialization contributed to my understanding of the fundamentals of how modern AI systems work, the role of data and algorithms, and how artificial intelligence is shaping the future of learning, information acquisition, and the digital environment.

This is particularly relevant to work with children because artificial intelligence is increasingly appearing at an earlier age in children's learning and everyday lives.

The knowledge I have acquired enables me to think more consciously about the effects of AI on children, the development of digital competence, and the responsible and safe use of technology.

Northwestern University's Social Media Marketing Specialization further strengthened my understanding of how social media works, digital communication, content creation, and reaching audiences online.

This is also closely connected to the world of children, as social media has now become a significant part of the communication, information, and socialization environment of children and young people.

The competencies acquired here make it possible to better understand the impact of online communication, the influence of digital content on children, and the importance of conscious, age-appropriate, and responsible online communication.

Alongside my studies related to children and young people, my professional interests gradually expanded to include communication in business and organizational environments, as well as strategic and management perspectives.

The aim was to understand communication not only from the perspective of the development of children and young people, but also from the perspective of organizational operations, business relationships, and strategic decision-making.

This direction was further deepened through business, communication, finance, project management, and leadership specializations completed at various international universities.

The University of Colorado Boulder's programs primarily developed my competencies in business communication, marketing, strategic communication, and public relations.

Through the "Social Media as a Marketing Tool in Business Communication" specialization, I became familiar with the role of social media in business communication and marketing, while "Business Communication" strengthened effective communication skills applied in business environments.

The "Concepts, Strategies, and Analytics in Performance Marketing and Digital Advertising" specialization developed a strategic and analytical approach to online marketing.

"International Business" contributed to an understanding of the international business environment, while "Strategic Communication Campaigns" contributed to a strategic approach to communication campaigns.

The "Databases for Data Scientists" course provided knowledge related to databases, thereby strengthening the skills required for structured work with data.

"Introduction to Public Relations and the Media" developed my understanding of the relationship between PR and the media, while "Crisis Management and Crisis Communication" developed competencies related to crisis management and crisis communication.

Universidad Nacional Autónoma de México (UNAM)'s "Especialización en Finanzas Corporativas" specialization expanded my knowledge in the field of corporate finance.

UC Irvine's programs focused on project management, career development, communication, leadership, and conflict management.

The "Project Management & Other Tools for Career Development" and "Project Management Principles and Practices" specializations developed the perspectives and skills required for the structured planning and management of projects.

"Career Success" strengthened competencies related to professional development, while "Conflict Management" developed the skills required to recognize and manage conflict situations.

"Introduction to Business" supported an understanding of the fundamental relationships underlying business operations.

"Corporate Communications" provided professional knowledge in the field of corporate communication, while "Project Management" further deepened my project management competencies.

"Remote Leadership for Managers" developed skills related to leadership in remote work environments, with particular emphasis on managerial communication and coordination.

The University of Illinois Urbana-Champaign's "Strategic Leadership and Management" specialization developed my competencies in strategic leadership and management.

The course contributed to my understanding of leadership not merely as an operational task, but as an activity requiring strategic thinking, and enabled me to apply decision-making, organizational, and leadership skills related to management in a more structured manner.

In my current role as President of the French association NVO987 – Culture Visuelle Moderne et Contemporaine, I participate in coordinating its cultural, artistic, educational, and research activities.

NVO987 carries out projects in the fields of contemporary art, visual culture, and cultural studies, including exhibitions, art projects, training programs, conferences, and professional programs.

The association also works to promote awareness and realization of children's rights and implements research programs on visual environments, education, social change, and cultural participation.

An important part of its activities is the development of national and international professional collaborations with artists, researchers, educators, cultural and educational institutions, associations, and foundations.

NVO987 also develops digital cultural and research infrastructures, online platforms, and publishing projects, as well as publishing cultural and professional publications, books, and journals.
